Re: 170.314(g)(4) Quality Management System Summary Report and Attestation

Organization and Product name and Version seeking certification:

Acmeware OneView Version 4.1

Acmeware utilizes industry-standard Agile Product and Application Lifecycle Management (APLM & AALM) for a Quality Management System used in the development, testing, implementation, and maintenance of each certification criteria.

Acmeware utilizes Microsoft Team Foundation Server and Microsoft Visual Studio software for project planning, project governance, performance analysis, process guidance, customer collaboration, version control, work item tracking, build management and more.

Sincerely,

William S. Presley
Manager of Software Products

Re: 170.314.d.2-2: Permit Audit Log Disabling Attestation, 170.314.d.2-4: Protect Audit Log Attestation, 170.314.d.2-5: Detection of Audit Log Alteration Attestation

Organization and Product name and Version seeking certification:

Acmeware OneView Version 4.0

170.314.d.2-2: Permit Audit Log Disabling Attestation:

Acmeware does not permit disabling of the patient audit log in OneView.

170.314.d.2-4: Protect Audit Log Attestation:

OneView is implemented with salted hashing of the audit log. When the audit log record is created for each auditable event a hash value is created for each audit log record using SHA-256 with a salt value (SHA-2, SHA-256, output size(bits) 256). The Salt is generated using a cryptographically secure number that is unique per audit log record.

170.314.d.2-5: Detection of Audit Log Alteration Attestation:

The method used to identify if the audit log has been altered is a hash with salt comparison. To detect whether the audit log has been altered the audit log record salt and hash are compared with the human readable auditable event and any difference would result in a mismatch. Regarding the following 3 methods by which OneView protects:

1. Recording of actions related to electronic health information.
 - a. The following actions are allowed and recorded in OneView:
 - a. View
 - b. Add
 - c. Edit
 - d. Export - Encrypted data export

Note: No records are deleted from the database, a flag is set to inactivate a record.

2. Recording of audit log status

- a. The audit log is always enabled and auditing events. AcmeWare does not permit disabling of the audit log in OneView. If the method for Detection of Audit Log Alteration identifies a mismatch, the mismatch is recorded in the system and users are alerted.

3. Recording of encryption status from being changed, overwritten, or deleted by the EHR technology.

- a. Encryption status is always enabled and always on. AcmeWare does not allow any users to perform the disabling of encryption status in OneView.

Sincerely,

William S. Presley

Re: 170.314.d.7 - Encryption of Data at Rest Attestation

Organization and Product name and Version seeking certification:

Acmeware OneView Version 4.0

DTR170.314(d)(7) - 1: Determine Encryption Algorithm Used Attestation

OneView is capable of encrypting electronic health information stored on an end-user device by using Triple-DES Encryption Algorithm (TDEA) under Approved Security Functions for FIPS PUB 140-2 Security Requirements for Cryptographic Modules.

OneView uses Triple-DES encryption algorithm to generate message keys and device transport keys. Our two-key DES algorithm encrypts the data with the first key (56-bit), decrypts it with the second key (56-bit) and then encrypts the data again with the first key.

OneView protect its own keys within the executable bits of the software, which is unavailable to users. OneView provides a safe User Interface (UI) within the application to access the encryption and decryption functionality for standard operational usages or running self-tests.

Sincerely,

William S. Presley
Manager of Software Products
Acmeware, Inc.
